Re: New U.S. Patent Application  
Title: SYSTEMS AND METHODS FOR BUYING AND SELLING  
TELECOMMUNICATION SERVICES VIA A NETWORK  
Inventors: Charles A. PEYSER, Constance BEYER, Michael D.  
McLAUGHLIN

Sir:

We enclose the following papers for filing in the United States Patent and Trademark Office in connection with the above patent application.

1. Application - 29 pages, including 10 independent claims and 38 claims total.
2. Drawings - 15 sheets of informal drawings (Figures 1-2, 3A-3B, 4-5, 6A-6C, 7, 8A-8B, 9A-9B, 10-11).
3. Declaration and Power of Attorney.
4. Recordation Form Cover Sheet and Assignment to TelecomXchange, Inc.
5. A check for \$1,670.00 representing a \$760.00 filing fee, \$870.00 for additional claims, and \$40.00 for recording the Assignment.

Please accord this application a serial number and filing date and record and return the Assignment to the undersigned.

The Commissioner is hereby authorized to charge any additional filing fees due and any other fees due under 37 C.F.R. § 1.16 or § 1.17 during the pendency of this application to our Deposit Account No. 06-0916.

**SYSTEMS AND METHODS FOR BUYING AND SELLING  
TELECOMMUNICATION SERVICES VIA A NETWORK**

# SYSTEMS AND METHODS FOR BUYING AND SELLING TELECOMMUNICATION SERVICES VIA A NETWORK

## RELATED APPLICATIONS

This application claims priority from U.S. Provisional Application No. 60/138,509, entitled "Methods For Providing Telecommunications Service Buying and Selling Via the Internet," filed on June 10, 1999, which is incorporated herein by reference. This application is related to copending U.S. Application Serial No. 09/\_\_\_\_,\_\_\_\_ (Atty. Docket No. 7710.0002-00), entitled "Systems and Methods For Aggregating Buyers For the Purchase of Telecommunication Services Via a Network," which is assigned to the same assignee and filed on the same date as this application, and also incorporated herein by reference.

## FIELD OF THE INVENTION

The present invention relates generally to the purchase of telecommunication services and, more particularly, to a forum through which buyers can purchase telecommunication services from a variety of sellers via a network, such as the Internet.

## BACKGROUND OF THE INVENTION

Traditionally, telecommunication services, such as local, long distance, Internet, cellular services, etc., have been bought and sold through the interaction of people. Typically, the buy-sell process takes one of two forms: (1) a buyer determines the necessary telecommunication service requirements and contacts one or more sellers of these services; or (2) a seller proactively solicits the buyer, who may or may not be ready to purchase the services.

For larger-sized companies, the service requirements are usually complex and the buyer sophisticated. Therefore, the first form typically predominates (i.e., a buyer initiates the communication with a seller in these instances). For small and medium-sized companies, as well as for consumers, the service requirements are usually much less complex and the buyer less sophisticated. Therefore, the second form typically predominates. The seller contacts the buyer via different methods, such as door-to-door canvassing, telemarketing, direct mailing, advertising, etc.

There are two apparent problems with the conventional buy-sell process. First, buyers are at a disadvantage because there is no easy way for them to find information regarding the different types of services offered by sellers or to obtain the best pricing without a great deal of effort. As a result, buyers do not know whether they are getting the best possible deal from the seller. In other words, the seller usually controls the buy-sell process.

Second, sellers typically have to exert much money and effort in the form of advertising and staff to solicit business from buyers. A substantial part of the price of telecommunication services is driven by these factors.

Therefore, there is a need to level the playing field for the purchase of telecommunication services by allowing buyers to have more control in the buy-sell process, and a need to reduce the expense incurred by sellers to contact buyers ready to purchase their services.

## SUMMARY OF THE INVENTION

Systems and methods consistent with the present invention address these needs by providing a forum through which buyers interact with sellers for the purchase of telecommunication services.

5 In accordance with the purpose of the invention as embodied and broadly described herein, a system consistent with the present invention facilitates the purchase of telecommunication services from a variety of service providers. The system receives a request for purchasing at least one telecommunication service from a buyer via a buyer terminal, provides the request to a group of seller terminals corresponding to a group of the service providers, and receives a reply from the seller terminals in response to the request. The system then provides the replies to the buyer terminal, receives a selection from the buyer terminal in response to the replies, and notifies a service provider of the selection and an identity of the buyer.

## BRIEF DESCRIPTION OF THE DRAWINGS

The accompanying drawings, which are incorporated in and constitute a part of this specification, illustrate an embodiment of the invention and, together with the description, explain the invention. In the drawings,

Fig. 1 is an exemplary diagram of a system consistent with the present invention;

20 Fig. 2 is an exemplary diagram of the telecommunication services manager of Fig. 1;

Fig. 3A is an exemplary diagram of the request for proposal (RFP) database of Fig. 2;

Fig. 3B is an exemplary diagram of the buyer database of Fig. 2;

Fig. 4 is a flowchart of processing for purchasing telecommunication services in a manner consistent with the present invention;

Fig. 5 is a flowchart of processing for registering a buyer in a manner consistent with the present invention;

5 Figs. 6A-6C are flowcharts of processing for creating an RFP in a manner consistent with the present invention;

Fig. 7 is a flowchart of processing for distributing an RFP in a manner consistent with the present invention;

Figs. 8A and 8B are flowcharts of processing for reviewing results of previously submitted RFPs in a manner consistent with the present invention;

Fig. 9A is a diagram of an exemplary user interface containing an RFP summary report;

Fig. 9B is a diagram of an exemplary user interface containing an RFP detailed report;

Fig. 10 is a flowchart of processing for reviewing industry information in a manner consistent with the present invention; and

Fig. 11 is a flowchart of processing for changing buyer account information in a manner consistent with the present invention.

### DETAILED DESCRIPTION

The following detailed description of implementations consistent with the present invention refers to the accompanying drawings. The same reference numbers in different drawings identify the same or similar elements. Also, the following detailed description does not limit the invention. Instead, the scope of the invention is defined by the appended claims.

Systems and methods consistent with the present invention provide a forum through which buyers and sellers of telecommunication services interact. The buyers specify the types of services desired and the sellers submit proposals for providing the services. The buyers select the proposals that meet their requirements and contract with the particular sellers to provide the  
5 desired services and/or additional services.

## SYSTEM ELEMENTS

Fig. 1 is an exemplary diagram of a system 100 consistent with the present invention. The system 100 includes a buyer terminal 110 connected to several seller terminals 120 via a network 130. The system also includes a telecommunication services manager 140 connected to the buyer and seller terminals 110 and 120, respectively, via the network 130.  
10

The buyer terminal 110 may include a personal computer, such as an IBM-compatible computer, or the like, with a connection to the network 130. A single buyer terminal 110 has been shown for simplicity. Those skilled in the art will note that the present invention contemplates more than one buyer terminal 110 connected to the network 130. The seller terminals 120 may also include personal computers with connections to the network 130. The network 130 may include the Internet, an intranet, or some equivalent data network.  
15

The telecommunication services manager (TSM) 140 provides a forum through which the buyer terminal 110 can interact with the seller terminals 120 to purchase telecommunication services. Fig. 2 is an exemplary diagram of TSM 140, including a processor 210, at least one  
20 memory 220, an input/output (I/O) port 230, and a set of databases 240. The processor 210 may include any conventional microprocessor, such as a Pentium produced by Intel. The memory 220

includes one or more conventional storage devices, such as RAM, ROM, EEPROM, etc. The I/O port 230 is a conventional communication port for communicating with the network 130.

The databases 240 include a large capacity storage device that contains at least four sets of databases: a request for proposal (RFP) database 242, a buyer database 244, a qualification database 246, and a seller database 248. The RFP database 242 stores RFPs prepared by buyers.

Fig. 3A is an exemplary diagram of the RFP database 242. Each entry in the RFP database 242 includes multiple fields for information on an RFP, including an RFP number 310, buyer information 320, types of service data 330, question data 340, and prior usage data 350. The RFP number 310 uniquely identifies a particular RFP. The buyer information 320 includes information describing the buyer, including, for example, the buyer's name, address, location, company, possibly information on other buyers (e.g., others referred to TSM 140 by the buyer), credit information, etc. This information may be provided by the buyer or obtained from one or more commercial databases.

The types of service data 330 includes information identifying the services that the buyer wishes to purchase. The question data 340 includes particular questions for the sellers posed by the buyer. The prior usage data 350 includes data regarding prior telephone service usage by the buyer and/or estimates or assumptions on such usage derived from the buyer's answers to a set of queries provided by TSM 140.

The buyer database 244 (Fig. 2) stores RFP replies. An RFP reply is a seller's answer to an RFP. Fig. 3B is an exemplary diagram of the buyer database 244. Each entry in the buyer database 244 includes multiple fields for information regarding an RFP, including a buyer ID name 360, an RFP number 370, and one or more RFP replies 380. The buyer ID name 360

uniquely identifies a buyer. The RFP number 370 is the same as the RFP number 310 that uniquely identifies an RFP. There may be more than one RFP number 370 associated with a single buyer, if the buyer submitted more than one RFP. Each of the RFP replies 380 includes a seller's response to the buyer's RFP.

5           The qualification database 246 (Fig. 2) stores rules for qualifying a buyer to use the system 100. The database 246 includes rules, for example, that validate the identity of a buyer by comparing the buyer's contact information, social security number, or federal tax identification to a commercially available database or by analyzing the buyer's email address. Of course, other qualification rules may be used.

10           The seller database 248 stores seller information, such as boilerplate RFP replies and filter data, and may contain an area for the sellers to store data. The filter data contains criteria provided by the sellers as to the types of RFPs they want to receive. For example, a seller might indicate that they will provide service to only particular areas and desire RFPs requesting service in these areas.

## 15           PROCESSING FOR PURCHASING TELECOMMUNICATION SERVICES

Fig. 4 is a flowchart of processing for purchasing telecommunication services in a manner consistent with the present invention. The processing begins when a buyer, using buyer terminal 110, logs into TSM 140 via the network 130 [step 410]. The buyer may do this directly by using a conventional modem or some other connection or indirectly by entering an Internet address to  
20           access TSM's web site on the world wide web.

Once logged in, TSM 140 determines whether the buyer is registered, for example, by requiring the buyer to enter a login identifier and password [step 420]. It is also possible to store

this information in a special file on the buyer terminal 110 so that when the buyer accesses the TSM web site, the stored information is provided automatically to TSM 140 for verification. If the buyer has not previously registered, TSM 410 registers the buyer [step 430].

Fig. 5 is a flowchart of processing for registering a buyer in a manner consistent with the present invention. TSM 140 prompts the buyer to enter contact information [step 510]. The contact information might include the buyer's name, title, telephone and fax numbers, email address, and/or the name of the buyer's business. From this information, TSM 140 determines whether the buyer represents a business [step 520]. If so, TSM 140 prompts the buyer for business demographics, including, for example, the company size, industry, number of locations, whether there are any international sites, typical monthly spending on telecommunication services, etc. [step 530]. Alternatively or additionally, TSM 140 accesses a commercial database to obtain this information.

Once TSM 140 obtains the business demographics or if the buyer does not represent a business, TSM 140 determines whether the buyer represents a group of buyers [step 540]. The buyer may represent a group of buyers, such as a group of family and friends, association members, a group of small businesses, etc., that have previously agreed to submit an RFP for their telecommunication services. The seller that wins the selection provides service to all members of the group, though some members may be permitted to later drop out. This aggregation of buyers helps the buyers obtain a better price from the sellers by combining their purchasing power. If the buyer represents a group, TSM 410 prompts the buyer to identify the group representative and the members of the group by name or number (i.e., size) [step 550].

it [step 605] (Fig. 6A). TSM 140 then prompts the buyer to provide a descriptive name for the RFP [step 610].

Next, TSM 140 requests that the buyer identify the business sites for which service is sought [step 615]. TSM 140 prompts the buyer to specify the service(s) desired for each business site [step 620]. The buyer might select among several types of services, such as local, long distance, toll free, calling card, Internet, conference calling, private line/data, etc. Alternatively or additionally, the buyer might authorize TSM 140 to obtain customer service records from the buyer's local telephone company. For each service selected, TSM 140 prompts the buyer to identify the features to purchase [step 625]. The buyer might indicate that a feature is required, desired, or not wanted, and may indicate whether a service is new for the site or is replacing an already existing service.

Once the buyer identifies all the desired services for each site [steps 630 and 635], TSM 140 prompts the buyer for billing preference information [step 640]. The buyer specifies the name(s) and address(es) for the service bill. In certain instances, the buyer may also specify other billing parameters, such as the date upon which the bill will be due each month.

Next, TSM 140 requests that the buyer provide information regarding prior use of telecommunication services [step 645] (Fig. 6B). The buyer might provide copies of recent telecommunication service bills by fax, email, or regular mail or the buyer might enter this information into an electronic form provided by TSM 140. Alternatively, TSM 140 may access a database that contains this information. At this time, the buyer might also specify any changes to the prior usage. If no prior use data exists, such as in the case of a new company, the buyer might project the usage.

the results of a previously submitted RFP, TSM 140 generates and displays an RFP summary report [step 805]. TSM 140 periodically updates the report as it receives RFP replies from the sellers.

Fig. 9A is a diagram of an exemplary user interface in the form of a web page 900 containing an RFP summary report 910 consistent with the present invention. The summary report 910 includes an RFP number 920, an RFP name 930, a submit date 940, a due date 950, a total number of requested bidders 960, and a total number of responses so far 970. The RFP number 920 uniquely identifies an RFP. The buyer may have submitted more than one RFP and, therefore, may have more than one RFP number. The RFP name 930 is the name that the buyer provided for the RFP.

The submit date 940 is the date that the buyer completed the RFP. The due date 950 is the date by which all sellers must respond to the RFP to have their RFP replies considered by the buyer. The total number of requested bidders 960 is the total number of sellers on the RFP distribution list. The total number of responses so far 970 is the number of responses received from the sellers to date.

TSM 140 determines whether the buyer desires detailed information regarding a particular RFP shown in the RFP summary report based on input from the buyer [step 810] (Fig. 8A). If so, TSM 140 generates and displays a detailed report for the RFP [step 815].

Fig. 9B is a diagram of an exemplary user interface in the form of a web page 980 containing an RFP detailed report 990 consistent with the present invention. The detailed report 990 includes both the RFP number and name, as well as the status of the sellers' analysis. The status might include "Accepted, but not yet complete," "Accepted, reply is complete," or

“Rejected, no reply forthcoming.” The report 990 might also identify the sellers on the distribution list and the status of each reply. The buyer may select one of the sellers from the report to read the reply or find out why the RFP was rejected.

TSM 140 determines whether the buyer desires detailed information regarding any particular RFP reply based on input from the buyer [step 820] (Fig. 8A). If so, TSM 140 displays the reply for the buyer [step 825]. Alternatively, TSM 140 might email a copy of the reply to the buyer. If the buyer wants to review another RFP reply [step 830], TSM 140 displays the reply for the buyer [step 825]. If the buyer finally decides to place an order [step 835], TSM 140 generates an order form containing the specifics from the seller’s RFP reply and displays it along with the seller's contractual terms and conditions [step 840] (Fig. 8B).

If the buyer accepts the terms and conditions [step 845], TSM 140 sends an alert to the selected seller indicating the buyer's intent to order, along with the buyer's contact information [step 850]. Of course, TSM 140 might inform the seller, and possibly all sellers, of the buyer’s contact information at some earlier point. Once selected, the seller may contact the buyer to sign a contract for the desired telecommunication services.

TSM 140 also notifies all of the rejected sellers that the buyer does not intend to order from them [step 855]. Finally, TSM 140 sends a confirmation to the buyer and updates the buyer's RFP status information [step 860].

## PROCESSING FOR REVIEWING INDUSTRY INFORMATION

Fig. 10 is a flowchart of processing for reviewing industry information in a manner consistent with the present invention. When a buyer indicates a desire to review industry information, TSM 140 presents the buyer with several options [step 1010], such as to learn about

new technology and services, to review recent industry announcements, and to review sellers' web sites.

If the buyer wants to learn about new technology and services [step 1020], TSM 140 links the buyer to web pages providing such information using conventional technology. If the buyer wants to review recent industry announcements [step 1030], TSM 140 links the buyer to web pages providing this information using conventional technology. If the buyer wants to review sellers' web sites [step 1040], TSM 140 links the buyer to these web sites over the network 130 using conventional technology.

### PROCESSING FOR CHANGING BUYER ACCOUNT INFORMATION

Fig. 11 is a flowchart of processing for changing buyer account information in a manner consistent with the present invention. When the buyer wants to change the buyer's account information, TSM 140 presents the buyer with several options [step 1110], such as to change contact information, to change business demographics, and to change password.

If the buyer wants to change the contact information [step 1120], TSM 140 presents the buyer with the current information and permits the buyer to change it. TSM 140 receives the updated contact information and stores it [step 1125]. If the buyer wants to change the business demographics [step 1130], TSM 140 presents the buyer with the current information and permits the buyer to change it. TSM 140 receives the updated business demographics and stores it [step 1135].

If the buyer wants to change the password [step 1140], TSM 140 prompts the buyer to enter the current password and then the new password twice. TSM receives the new password, and if the current password is correct and the two entries of the new password match, TSM 140

records the new password [step 1145]. When the buyer completes all changes, the buyer so indicates [step 1150].

## CONCLUSION

The systems and methods consistent with the present invention provide a forum through which buyers can purchase telecommunication services from a variety of sellers. The present invention levels the playing field by giving buyers more power than they presently have in the buy-sell process.

The foregoing description of preferred embodiments of the present invention provides illustration and description, but is not intended to be exhaustive or to limit the invention to the precise form disclosed. Modifications and variations are possible in light of the above teachings or may be acquired from practice of the invention. The scope of the invention is defined by the claims and their equivalents.

For example, the RFP approval process has been described as a group of sellers receiving an RFP and separately determining whether to approve or reject it. Alternatively, TSM 140 may contain a database of previously generated replies from the sellers. TSM 140 may query the database using the terms of the RFP and obtain one or more replies to present to the buyer.

## WHAT IS CLAIMED IS

1. A method for purchasing telecommunication services, comprising:

receiving a request for purchasing at least one telecommunication service from a buyer  
via a buyer terminal;

5 providing the request to a plurality of seller terminals, each of the seller terminals being  
associated with a different provider of telecommunication services;

receiving a reply from at least one of the seller terminals in response to the request;

providing the reply to the buyer terminal;

receiving a selection from the buyer terminal in response to the reply; and

10 notifying a provider of the selection and an identity of the buyer.

2. The method of claim 1, further comprising:

registering the buyer prior to receiving the request.

15 3. The method of claim 2, wherein the registering includes:

obtaining contact information from the buyer,

obtaining a buyer name for the buyer, and

assigning an initial password to the buyer.

20 4. The method of claim 2, wherein the registering includes:

obtaining business demographics from the buyer.

5. The method of claim 1, wherein the receiving a request includes:  
identifying billing preferences for the at least one telecommunication service.
6. The method of claim 1, wherein the receiving a request includes:  
receiving, from the buyer terminal, an identification of business sites to receive  
the at least one telecommunication service,  
identifying telecommunication services for each of the business sites, and  
identifying desired features of each of the telecommunication services.
7. The method of claim 1, wherein the receiving a request includes:  
obtaining information regarding prior use of telecommunication services of the  
buyer.
8. The method of claim 1, wherein the receiving a request includes:  
compiling a list of providers to receive the request; and  
wherein the providing the request includes:  
granting access to the request to only the providers on the list.
9. The method of claim 1, wherein the receiving a request includes:  
compiling a list of providers to receive the request; and  
wherein the providing the request includes:  
distributing the request to only the providers on the list.

10. The method of claim 1, wherein the receiving a request includes:

verifying an identity of the buyer; and

wherein the providing the request includes:

presenting the request to the seller terminals only when the identity of the buyer is

verified.

11. The method of claim 1, further comprising:

presenting, to the buyer terminal, contractual terms and conditions for providing the at

least one telecommunication service from the notified provider; and

receiving an acceptance of the terms and conditions from the buyer terminal.

12. The method of claim 1, further comprising:

receiving, from the seller terminals, filtering criteria that specifies types of requests the

providers want to receive; and

wherein the providing the request includes:

distributing the request to seller terminals based on the filtering criteria.

13. A system for purchasing telecommunication services, comprising:

means for receiving a request for purchasing at least one telecommunication service from

a buyer via a buyer terminal;

means for providing the request to a plurality of seller terminals, each of the seller

terminals being associated with a different provider of telecommunication services;

means for receiving a reply from at least one of the seller terminals in response to the request;

means for providing the reply to the buyer terminal;

means for receiving a selection from the buyer terminal in response to the reply; and

means for notifying a provider of the selection and an identity of the buyer.

14. A system for purchasing telecommunication services in a network connecting at least one buyer terminal, associated with a buyer, and a plurality of seller terminals, associated with different providers of telecommunication services, the system comprising:

a memory that stores data; and

a processor, connected to the memory, that receives a request for purchasing at least one telecommunication service from the buyer terminal via the network, provides the request to a group of the seller terminals via the network, receives a reply from at least one of the seller terminals in response to the request, provides the reply to the buyer terminal, receives a selection from the buyer terminal in response to the reply, and notifies a provider of the selection and an identity of the buyer.

15. The system of claim 14, wherein the processor is further configured to register the buyer prior to receiving the request.

16. The system of claim 15, wherein when registering the buyer, the processor is further configured to obtain contact information from the buyer, to obtain a buyer name for the buyer, and to assign an initial password to the buyer.

5 17. The system of claim 15, wherein when registering the buyer, the processor is further configured to obtain business demographics from the buyer.

18. The system of claim 14, wherein when receiving the request, the processor is further configured to identify billing preferences for the at least one telecommunication service.

10 19. The system of claim 14, wherein when receiving the request, the processor is further configured to receive, from the buyer terminal, an identification of business sites to receive the at least one telecommunication service, to identify telecommunication services for each of the business sites, and to identify desired features of each of the telecommunication services.

15 20. The system of claim 14, wherein when receiving the request, the processor is further configured to obtain information regarding prior use of telecommunication services of the buyer.

20 21. The system of claim 14, wherein when receiving the request, the processor is further configured to compile a list of providers to receive the request, and when providing the

request, the processor is further configured to grant access to the request to only the providers on the list.

22. The system of claim 14, wherein when receiving the request, the processor is further configured to compile a list of providers to receive the request, and when providing the request, the processor is further configured to distribute the request to only the providers on the list.

23. The system of claim 14, wherein when receiving the request, the processor is further configured to verify an identity of the buyer, and when providing the request, the processor is further configured to present the request to the seller terminals only when the identity of the buyer is verified.

24. The system of claim 14, wherein the processor is further configured to present, to the buyer terminal, contractual terms and conditions for providing the at least one telecommunication service from the notified provider, and to receive an acceptance of the terms and conditions from the buyer terminal.

25. The system of claim 14, wherein the processor is further configured to receive, from the seller terminals, filtering criteria that specifies types of requests the providers want to receive, and when providing the request, the processor is further configured to distribute the request to seller terminals based on the filtering criteria.

26. A computer-implemented method for purchasing telecommunication services,  
comprising:

generating a request for select telecommunication services;  
distributing the request to a plurality of sellers of telecommunication services;  
receiving replies to the request from the sellers;  
selecting at least one of the sellers based on the received replies; and  
notifying the at least one seller of the selection.

27. The method of claim 26, wherein the generating a request includes:  
compiling a list of sellers to receive the request; and  
wherein the distributing the request includes:  
granting access to the request to only the sellers on the list.

28. The method of claim 26, wherein the generating a request includes:  
compiling a list of sellers to receive the request; and  
wherein the distributing the request includes:  
transmitting the request to only the sellers on the list.

29. The method of claim 26, wherein the generating a request includes:  
verifying an identity of an initiator of the request; and  
wherein the distributing the request includes:  
presenting the request to the sellers only when the identity is verified.

30. A system for purchasing telecommunication services, comprising:  
means for generating a request for select telecommunication services;  
means for distributing the request to a plurality of sellers of telecommunication services;  
means for receiving replies to the request from the sellers;  
5 means for selecting at least one of the sellers based on the received replies; and  
means for notifying the at least one seller of the selection.

31. A system for purchasing telecommunication services, comprising:  
a memory that stores data; and  
a processor, connected to the memory, that generates a request for select  
telecommunication services, distributes the request to a plurality of sellers of telecommunication  
services, receives replies to the request from the sellers, selects at least one of the sellers based on  
the received replies, and notifies the at least one seller of the selection.

32. The system of claim 31, wherein when generating the request, the processor is  
further configured to compile a list of sellers to receive the request, and when distributing the  
request, the processor is further configured to grant access to the request to only the sellers on the  
list.

33. The system of claim 31, wherein when generating the request, the processor is  
further configured to compile a list of sellers to receive the request, and when distributing the  
request, the processor is further configured to transmit the request to only the sellers on the list.

34. The system of claim 31, wherein when generating the request, the processor is further configured to perform a qualification process to verify an identity of an initiator of the request, and when distributing the request, the processor is configured to present the request to the sellers only when the identity is verified.

5

35. A method comprising:

receiving requests for providing telecommunication services from a plurality of buyers via a plurality of buyer terminals;

providing the requests to a plurality of seller terminals, the requests excluding identities of the buyers, each of the seller terminals being associated with a different provider of telecommunication services;

receiving replies from the seller terminals in response to the requests;

providing the replies to the buyer terminals;

receiving selections from the buyer terminals based on the replies; and

notifying providers of the selections and the identities of the buyers.

36. A system for purchasing telecommunication services in a network connecting a plurality of buyer terminals, associated with a plurality of buyers, and a plurality of seller terminals, associated with a corresponding plurality of providers of telecommunication services, the system comprising:

a memory that stores data; and

a processor, connected to the memory, that receives requests for telecommunication services from the buyers via the buyer terminals, provides the requests to groups of the seller terminals, the requests excluding identities of the buyers, receives replies from the seller terminals in response to the requests, provides the replies to the buyer terminals, receives selections from the buyer terminals based on the replies, and notifies providers of the selection and the identities of the buyers.

37. A computer-readable medium configured to store instructions that cause a computer to perform the steps of:

- receiving requests for providing telecommunication services from a plurality of buyers via a plurality of buyer terminals;
- providing the requests to a plurality of seller terminals, the requests excluding identities of the buyers, each of the seller terminals being associated with a different provider of telecommunication services;
- receiving replies from the seller terminals in response to the requests;
- providing the replies to the buyer terminals;
- receiving selections from the buyer terminals based on the replies; and
- notifying providers of the selections and the identities of the buyers.

38. A computer readable medium configured to store instructions that cause a computer to perform the steps of:

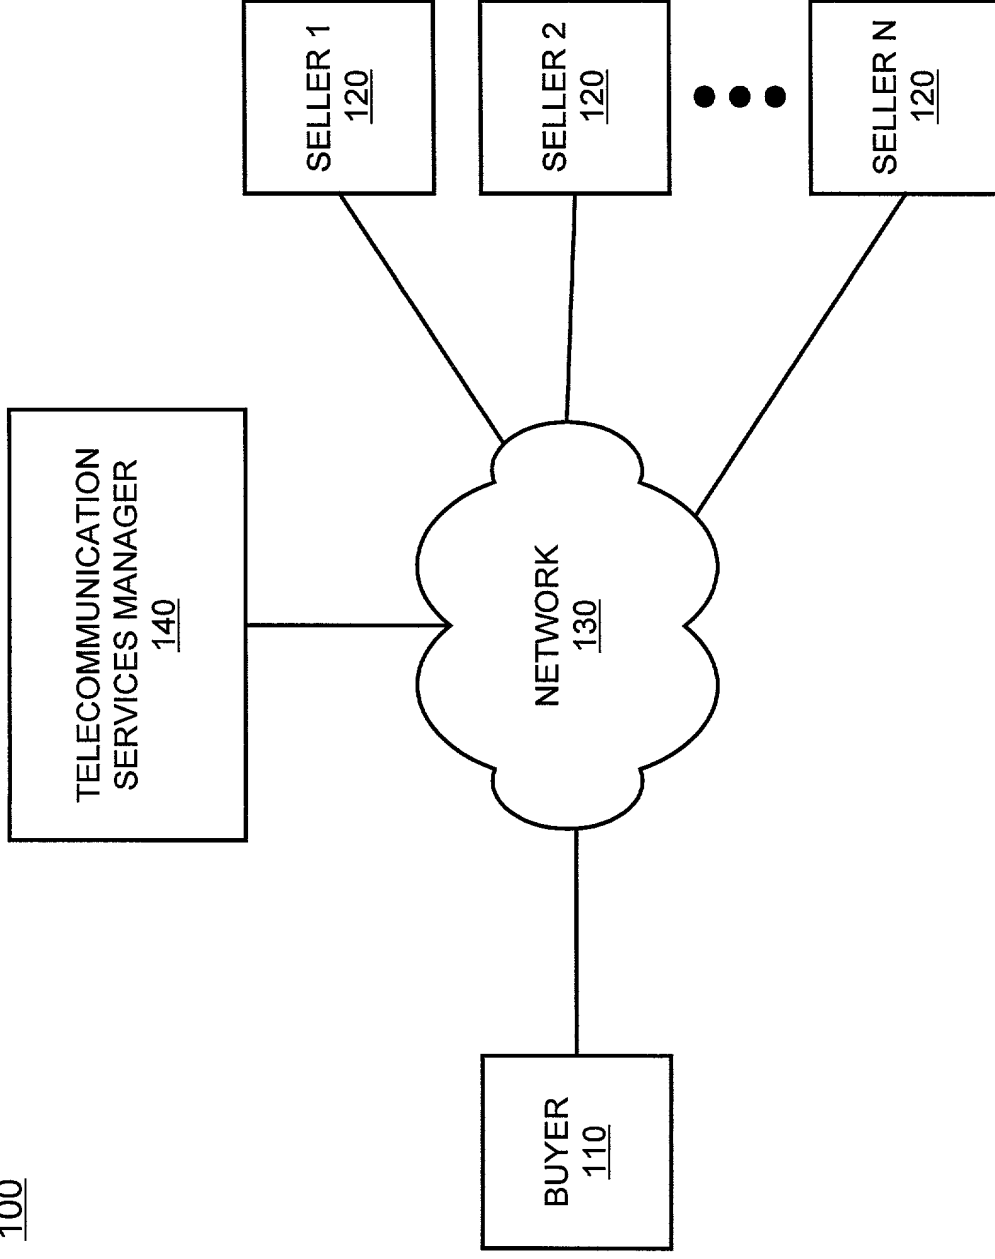

- generating a request for select telecommunication services;

distributing the request to a plurality of providers of telecommunication services;  
receiving replies to the request from the providers;  
selecting at least one of the providers based on the received replies; and  
notifying the at least one provider of the selection.

## ABSTRACT

A system facilitates the purchase of telecommunication services from a variety of service providers. The system receives a request for purchasing at least one telecommunication service from a buyer via a buyer terminal, provides the request to a group of seller terminals  
5 corresponding to a group of the service providers, and receives a reply from the seller terminals in response to the request. The system then provides the replies to the buyer terminal, receives a selection from the buyer terminal in response to the replies, and notifies a service provider of the selection and an identity of the buyer.

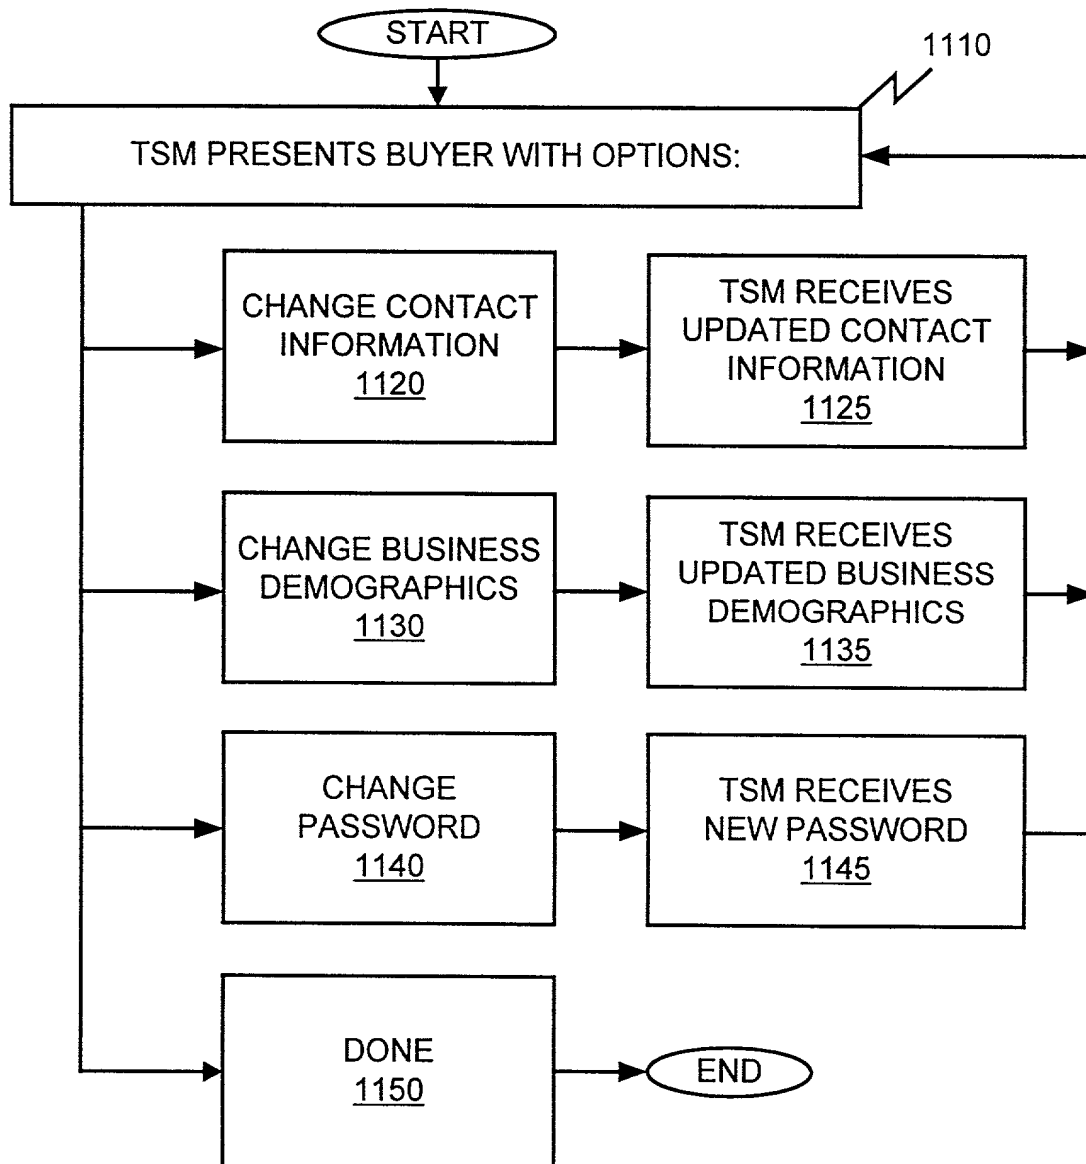

FIG. 11

**DECLARATION AND POWER OF ATTORNEY**

As a below named inventor, I hereby declare that: my residence, post office address and citizenship are as stated below next to my name; I believe I am the original, first and sole inventor (if only one name is listed below) or an original, first and joint inventor (if plural names are listed below) of the subject matter which is claimed and for which a patent is sought on the invention entitled: SYSTEMS AND METHODS FOR BUYING AND SELLING TELECOMMUNICATION SERVICES VIA A NETWORK, the specification of which is attached.

I hereby state that I have reviewed and understand the contents of the above-identified specification, including the claims, as amended by any amendment referred to above. I acknowledge the duty to disclose information which is material to the examination of this application in accordance with Title 37, Code of Federal Regulations, § 1.56.

I hereby claim foreign priority benefits under 35 U.S.C. § 119(a)-(d) or § 365(b) of any foreign application(s) for patent or inventor's certificate or § 365(a) of any PCT international application(s), designating at least one country other than the United States, listed below and have also identified below any foreign application(s) for patent or inventor's certificate, or any PCT international application(s) having a filing date before that of the application(s) of which priority is claimed:

Country	Application Number	Date of Filing	Priority Claimed Under 35 U.S.C. 119
			<input type="checkbox"/> YES <input type="checkbox"/> NO
			<input type="checkbox"/> YES <input type="checkbox"/> NO

I hereby claim the benefit under 35 U.S.C. § 119(e) of any United States provisional application(s) listed below:

Application Number	Date of Filing
60/138,509	June 10, 1999

I hereby claim the benefit under 35 U.S.C. § 120 of any United States application(s) or § 365© of any PCT international application(s) designating the United States, listed below and, insofar as the subject matter of each of the claims of this application is not disclosed in the prior United States or PCT international application(s) in the manner provided by the first paragraph of 35 U.S.C. § 112, I acknowledge the duty to disclose information which is material to patentability as defined in 37 CFR § 1.56 which became available between the filing date of the prior application(s) and the national or PCT international filing date of this application:

U.S. Applications		Status (Check One)		
U.S. Application Number	U.S. Filing Date	Patented	Pending	Abandoned

PCT Applications Designating the U.S.					
PCT Application No.	PCT Filing Date	U.S. Serial Number Assigned (if any)			

I hereby appoint the following attorney and/or agent(s) to prosecute this application and transact all business in the Patent and Trademark Office connected therewith. **FINNEGAN, HENDERSON, FARABOW, GARRETT & DUNNER, L.L.P.**, Douglas B. Henderson, Reg. No. 20,291; Ford F. Farabow, Jr., Reg. No. 20,630; Arthur S. Garrett, Reg. No. 20,338; Donald R. Dunner, Reg. No. 19,073; Brian G. Brunsvold, Reg. No. 22,593; Tipton D.
